The data in a data warehouse provides information from the historical point of view. Non-volatile – Non-volatile means the previous data is not erased when new data is added to it. A data warehouse is kept separate from the operational database and therefore frequent changes in operational database is not reflected in the data warehouse.

Keeping the operational and transactional information to generate volume, density, and especially the data sources, is the crucial role of data warehousing. Data Mining is not basically the extraction of data, but it is the process to extract value from any particular data. Actually, it is based on analyzing information, identifying patterns, and creating visualization from the already saved data to get meaningful insights.
