In metrology, measurement uncertainty is the expression of the statistical dispersion of the values attributed to a measured quantity. All measurements are subject to uncertainty and a measurement result is complete only when it is accompanied by a statement of the associated uncertainty, such as the standard deviation.

Measurement uncertainty - Wikipedia

information about the doubt, or uncertainty, of our estimate. 2.3 It is also quite reasonable to assume that we may be more sure that our estimate is within, say, 5 degrees of the “true” room temperature than we are that it is within 2 degrees. The larger the uncertainty we

encompasses the “true” value.

The Expression of Uncertainty and Confidence in Measurement

Uncertainty of a measurement can be determined by repeating a measurement to arrive at an estimate of the standard deviation of the values. Then, any single value has an uncertainty equal to the standard deviation.

Uncertainty - Wikipedia

Definitions of uncertainty are not all helpful but all imply an element of doubt caused by a situation in which something is not known. Measurement uncertainty can be quantified statistically where we have numerical data.
