I recently started with reading your book on hypothesis testing (just finished the first chapter). I have a question w.r.t the fuel cost example (from first chapter), where a random sample of 25 families (with sample mean 330.6) is taken. To do the hypothesis testing here, we are taking a sampling distribution with a mean of 260.

Failing to Reject the Null Hypothesis - Statistics By Jim

A null hypothesis might state that the mean = x. You're testing if the mean is way above this or way below. You run a t-test, which churns out a t-statistic. If this test statistic falls in the top 2.5% or bottom 2.5% of its probability distribution (in this case, the t-distribution), you would reject the null hypothesis.
