Analysis (MCDA) approach and illustrate, where appropriate, how V•I•S•A can be utilised. This module will provide a step-by-step guide into how to operate the V•I•S•A program and how its many features can be employed. To achieve this, the first five of the seven steps of the Multi-criteria Decision Making process will be incorporated.

A Practical Guide to Multi-Criteria Decision Analysis

Professor Nutt begins this segment by describing his work on the analysis of the MCDA drug model. He explains that decision conferencing has become the standard way of dealing with very complicated questions (e.g. how to deal with nuclear waste). He discusses how each of the 20 drugs was ranked on each of the 16 parameters of harm.

Post-MCDA analysis of drug-related harms By Prof David Nutt

In this paper, a Multiple Criteria Decision Analysis (MCDA) methodological process, based on Multi Attribute Value Theory (MAVT), is adopted for building a multi-criteria evaluation model. A five-stage model-building process is followed, using a top-down "value-focused thinking" approach, involving literature reviews and expert consultations.
